

North-West Europe

Project intervention logic

All **blue elements** are to be elaborated at step 1 of the application process.
All **orange elements** are to be elaborated in detail at step 2.

The territorial analysis identifies a **need shared by several NWE countries** and the connected challenges to it. The analysis also considers relevant **strengths and opportunities** to address this need and **bring about the envisaged change**.

Each **work package** consists of **activities** divided into **deliverables** and an allocated **budget**.

The activities and their deliverables are depicted in a work plan.

The following **types of project outputs** must be jointly developed:

- Strategies/action plans →
- Pilot actions jointly developed & jointly implemented →
- Solutions →
- Training schemes →

Not every work package must have an output.
At least two types of outputs must be addressed.

To achieve **results** the project outputs must be taken up, upscaled or rolled out by organisations in NWE, leading to:

- ...taken up by organisations,
- ...taken up or up-scaled by organisations,
- ...taken up or up-scaled by organisations,
- ...completed,

This should lead to change and societal benefit in NWE.
