De implementatie van e-mental health

28th of March 2019, 9.30 - 16.30 u
VU Amsterdam, De Boelelaan 1105, 1081 HV Amsterdam

During the past 15 years a lot of e-mental health applications have been developed, but their implementation has often been less straightforward. Whereas the urgency for e-mental health is clear, the move towards structural and effective use of e-mental health seems to have reached a deadlock.

In this seminar the E-mental health innovation and transnational implementation platform North West Europe (eMEN) presents challenging opinions, workable solutions, and case studies, to inspire managers, policy makers, health care professionals, and researchers to get started with e-mental health. The seminar also covers the new Dutch reimbursement system, which will be launched in the near future, and may also be an example for a more steadfast implementation of e-mental health.
